Azure is coming

Azure global expansion

60+ Azure regions worldwide
50 – 100 new data centres planned each year*
10 new countries announced in 2021 alone

This is a Microsoft data-center at an undisclosed location. The red circle is expansion work, shown in detail on the next slide...

The investment Microsoft makes in global infrastructure is massive. The global expansion programme is continually investing in new Azure regions as well as expanding and enhancing existing ones.

This is data-center infrastructure at industrial scale. In some geographies these projects will be among the largest infrastructure investments ever made.

Microsoft data-centers are clean, highly automated and compliant environments with little human intervention required. No employee, contractor or visitor can visit a hallway like this without a documented reason to be there. When access is granted it is restricted to the hallway, rack and blade.

Overview of the reliability pillar

11/13/2021 • 4 minutes to read • +6

In this article

[Topics and best practices](#)
[Next step](#)

Reliability ensures your application can meet the commitments you make to your customers. Architecting resiliency into your application framework ensures your workloads are available and can recover from failures at any scale.

Building for reliability includes:

- Ensuring a highly available architecture
- Recovering from failures such as data loss, major downtime, or ransomware incidents

To assess the reliability of your workload using the tenets found in the [Microsoft Azure Well-Architected Framework](#), reference the [Microsoft Azure Well-Architected Review](#).

High availability (HA) with Availability Zones

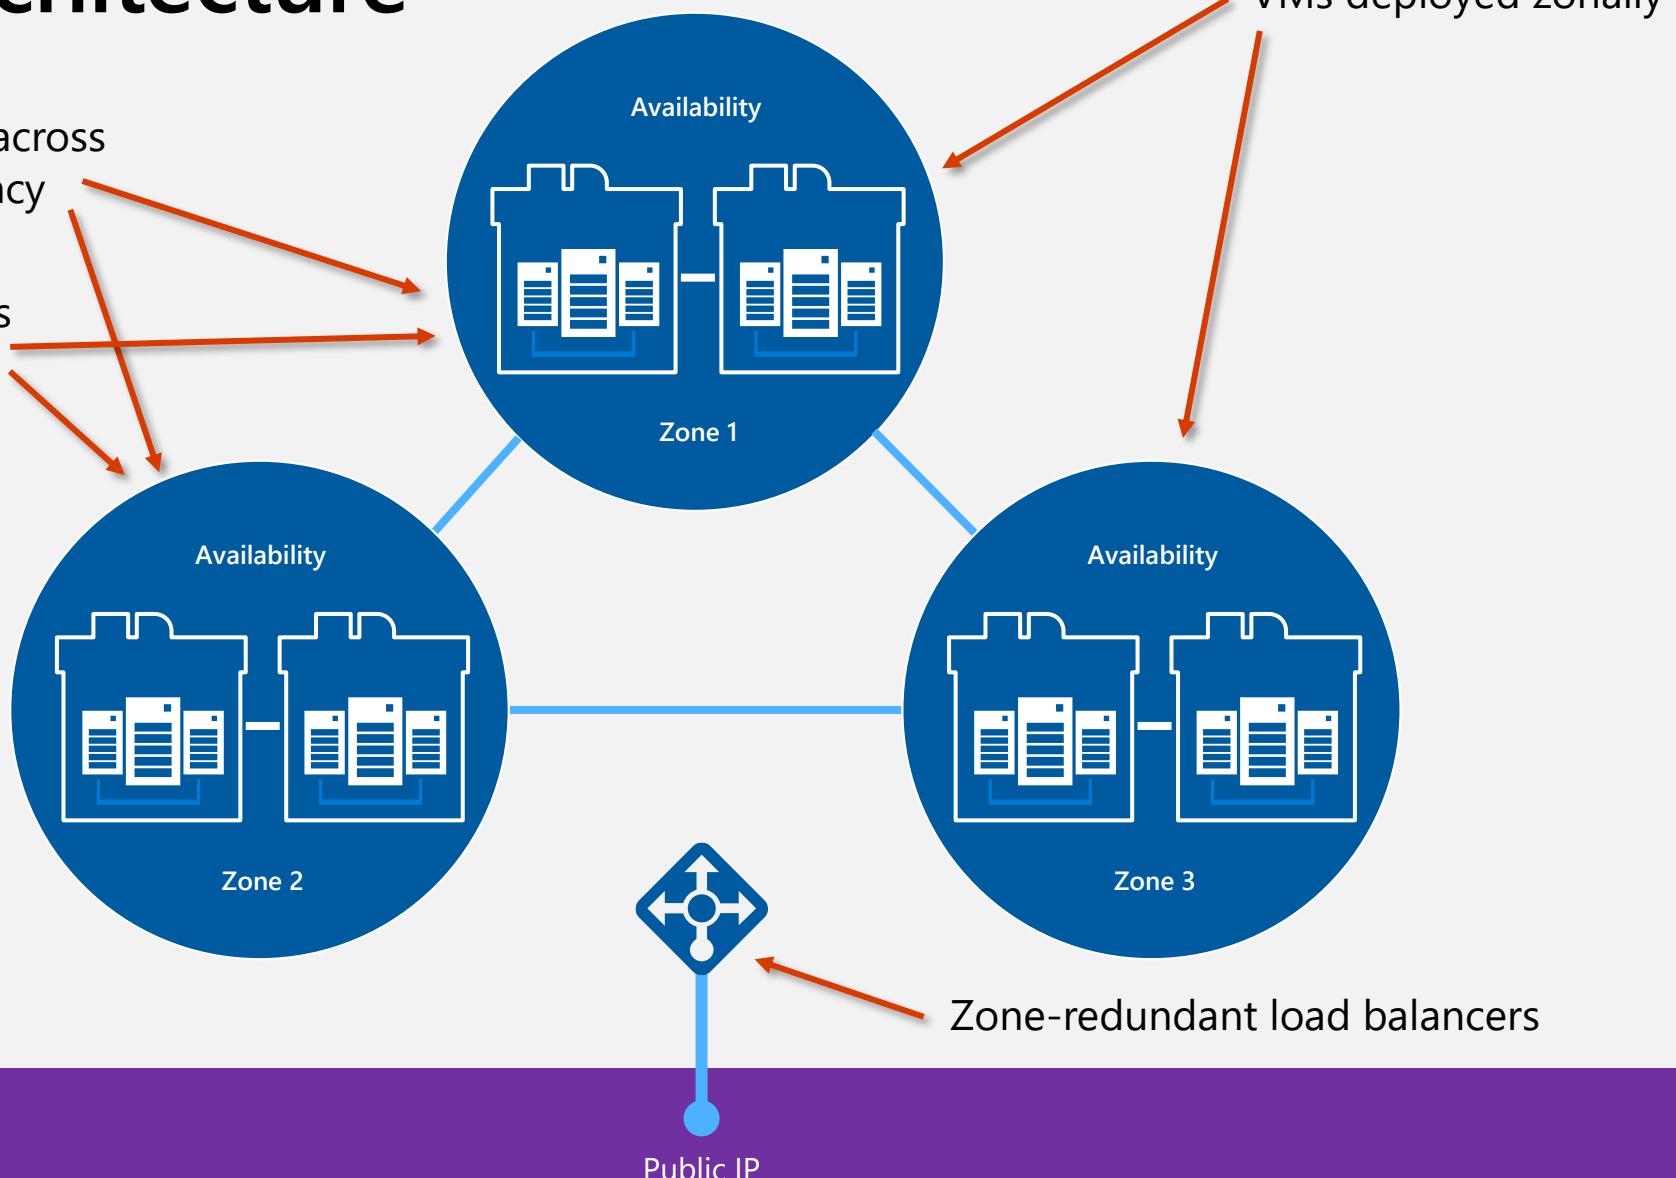

Physical architecture

Logical architecture

Platform services deployed across zones for zone-redundancy

Azure management services replicated across zones

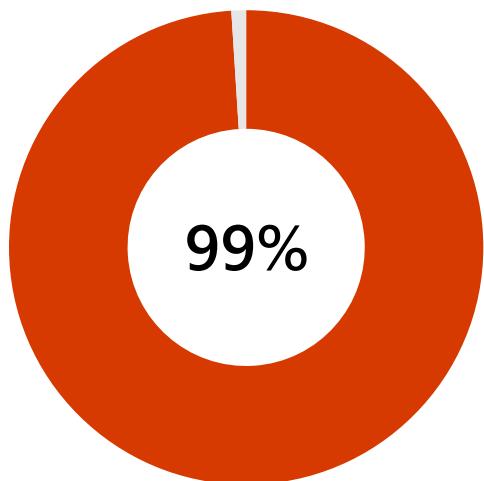

Business requirements for HA

Q. What is your
RTO?

Q. What is your
uptime SLO?

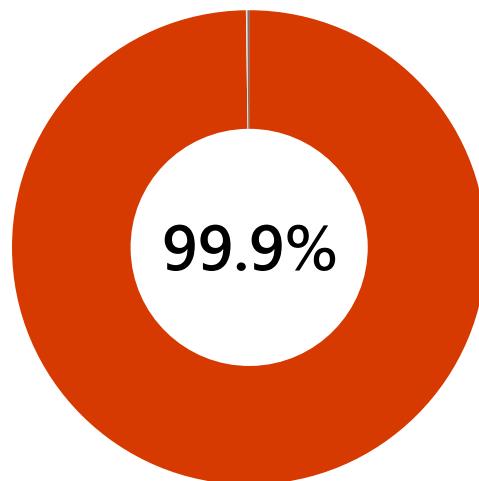

What is the business requirement for uptime?

Two nines

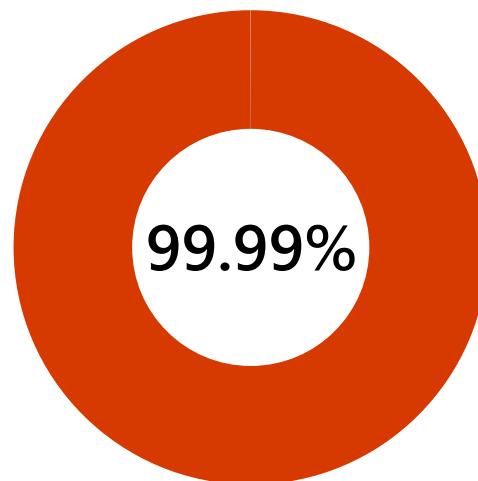

Plan for 7 hours, 18 minutes
of downtime per month

Three nines

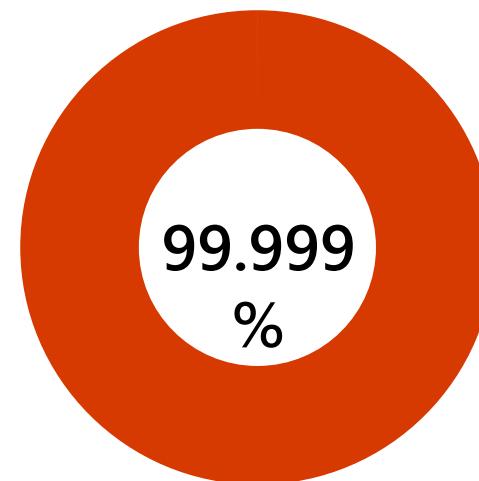

Plan for 44 minutes of
downtime per month

Four nines

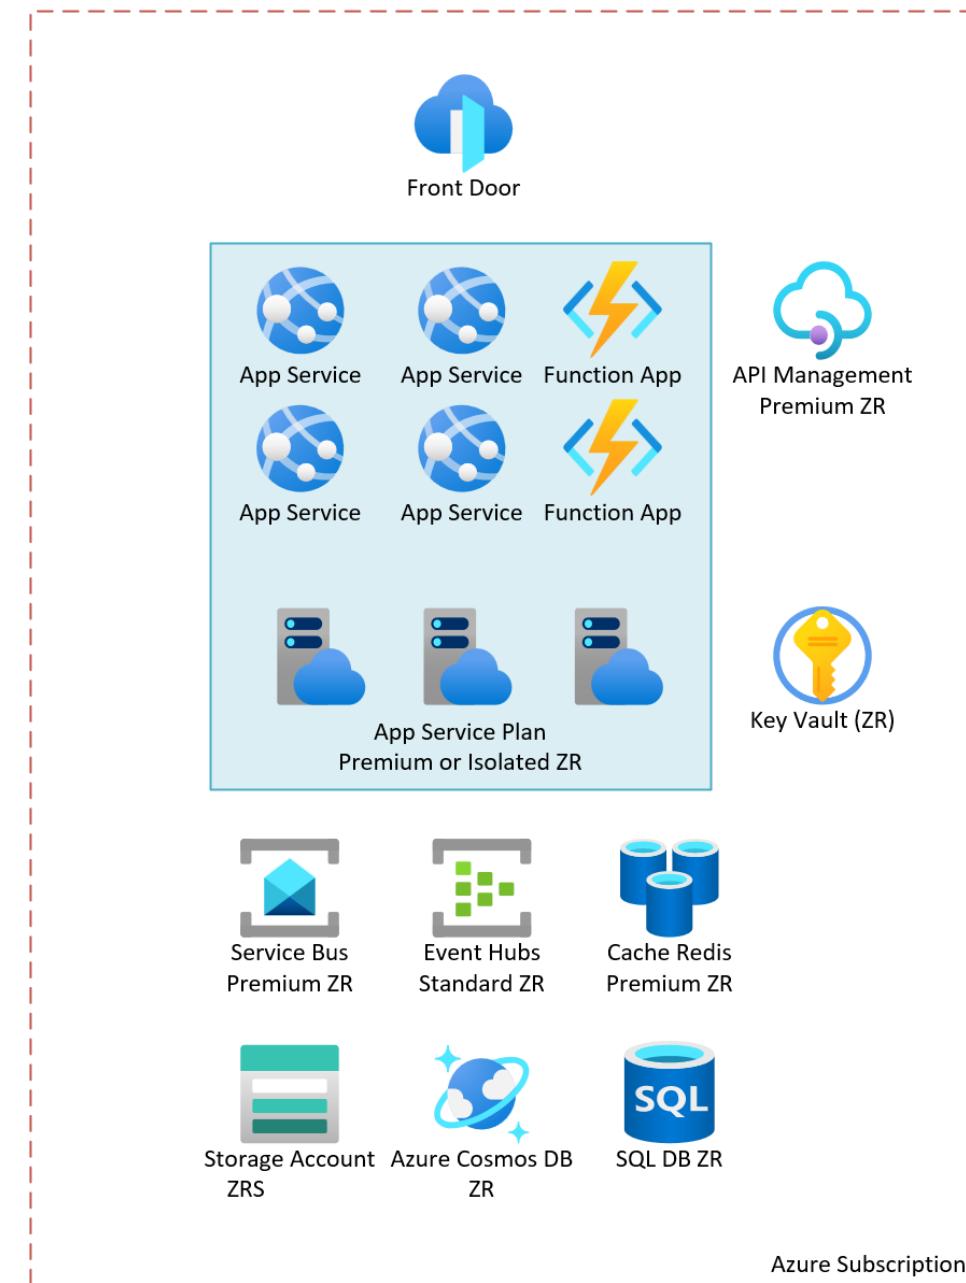

Plan for 4 minutes of
downtime per month

Five nines

Plan for 26 seconds of
downtime per month

Zone-redundancy

Disaster Recovery

Business requirements for DR

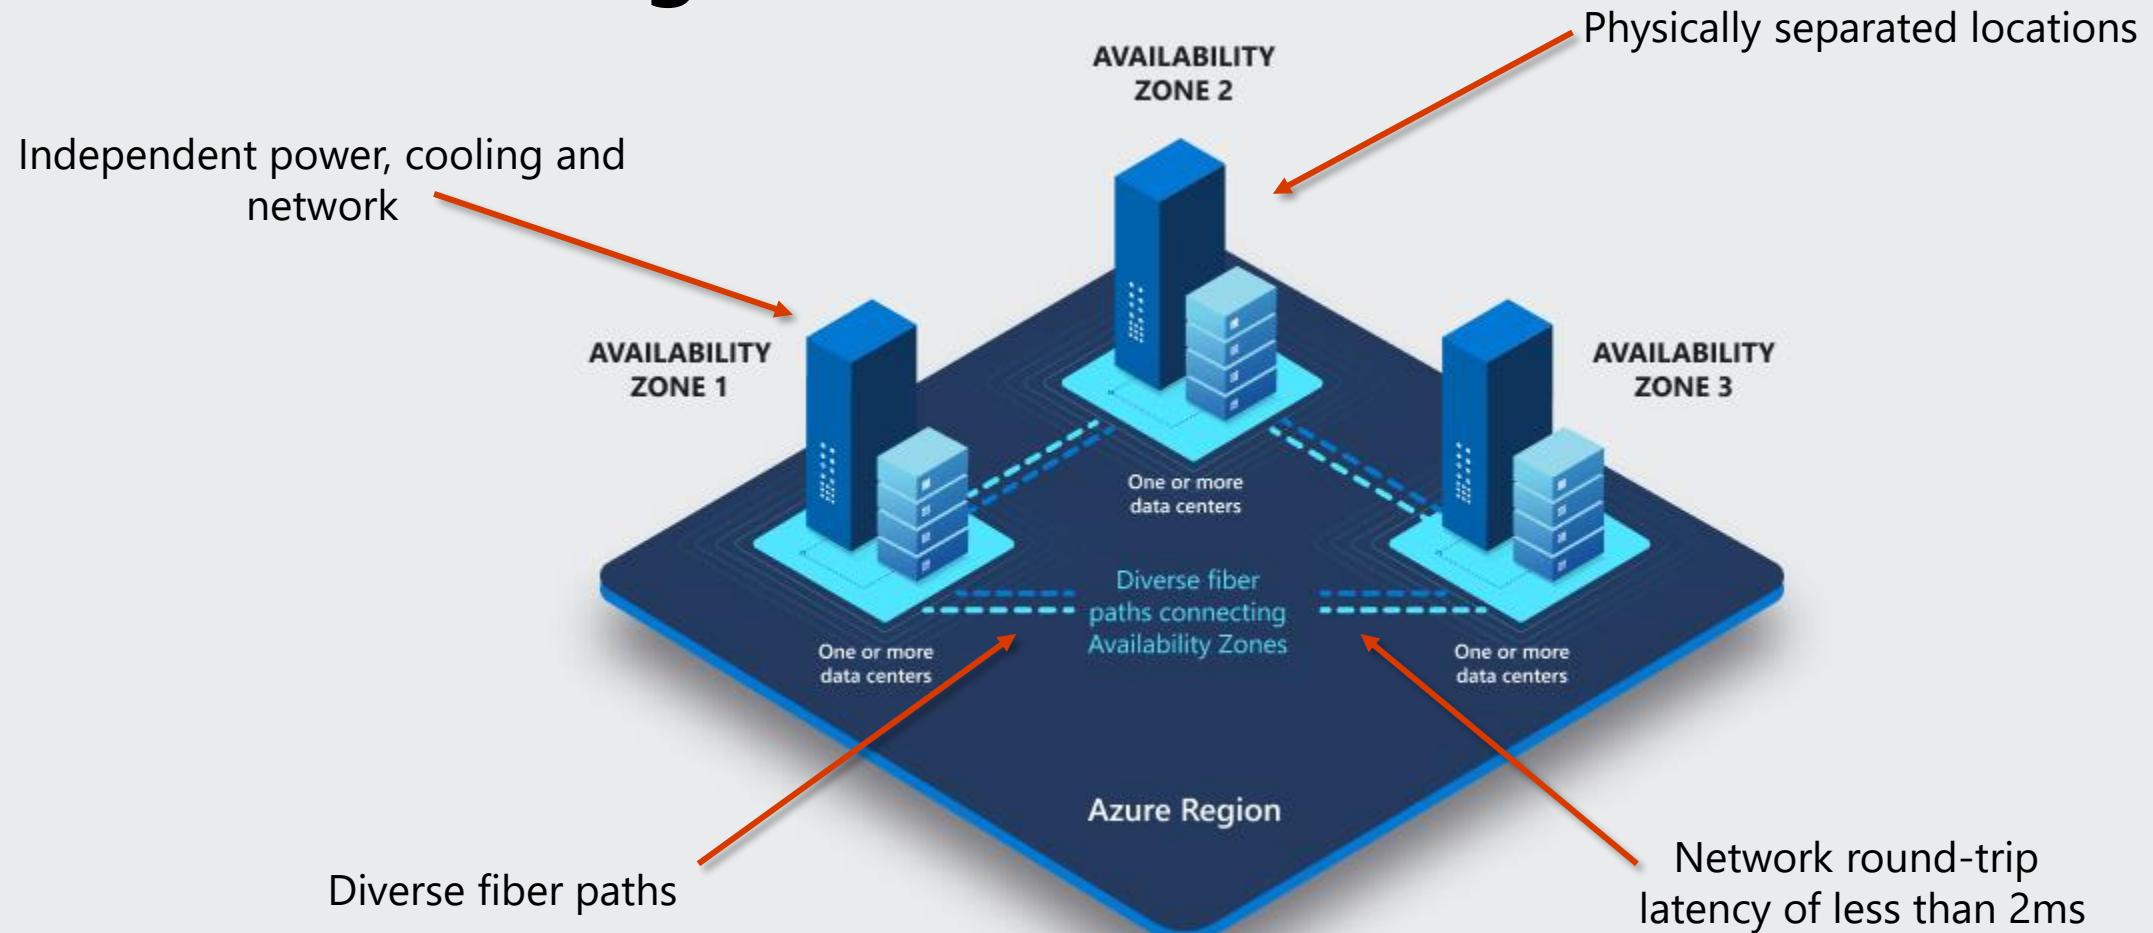

Q. What is your RPO?

Q. Where will you store the backups?

Region pairs
